

brainpower your pumps!

## SCREW SPINDLE PUMPS 2023

# CONTROL, OPTIMIZE, DIGITALIZE.

Industry 4.0 in perfection: Utilizing bplogic pump control allows to intelligently integrate BRINKMANN PUMPS' know-how between machine tools, pumps, filtration systems and other components.

bplogic adapts perfectly to the existing system environment – no matter which variable frequency drives are used.

brainpower your pumps!

## Electrical Features

### Motors acc. to EN 60034-1

Protective system	IP55
Insulation class	F
Number of poles	2
Efficiencies	EN 60034-30, IE3 ≥ 0,75 kW

	50 Hz		60 Hz	
	220 V – 240 V △ 380 V – 415 V ▽	380 V – 415 V △	460 V ▽	460 V △
up to 5.5 kW	Standard	●	Standard	●
as of 6.0 kW	–	Standard	–	Standard

In accordance with DIN EN 60034-1, **Zone A**, and permanent operation, the voltage tolerance is ± 5 % and the frequency tolerance is ± 2 %.

Special voltages are available upon request:

	200 V	200 V 220 V	200 V – 220 V 400 V	380 V	400 V	415 V	440 V	480 V	500 V	575 V	200 V ▽▽ 400 V ▽	230 V ▽▽ 460 V ▽
50 Hz	●	–	–	●	●	●	–	–	●	–	●	–
60 Hz	–	●	●	●	●	–	●	●	–	●	–	●

● available – not available

Other voltages upon request.

For special demands, versions for use with a standardized voltage 50 and 60 Hz (Transformer usage) are possible after consulting with the company, e. g. 3 x 400 V, ± 5 %, 50 – 60 Hz.

### Motors as of 6 kW

Motors are △ connected.

The motor design allows ▽/△-starting, if required.

Screw-spindle pumps used for ▽/△-starting must be started without pressure.

Soft-starting devices are a recommendable alternative to ▽/△-starting.

### Switching-on frequency

Motors less than 3 kW ►  
maximum 200 times per hour

Motors from 3 kW to 4 kW ►  
maximum 40 times per hour

Motors from 5 kW to 9 kW ►  
maximum 20 times per hour

Motors as of 11 kW ►  
maximum 15 times per hour

Higher on/off cycling frequencies are available upon request.

### Non-European Regulations, Brinkmann motors

Approved by UL with „UL Recognized Component Mark“ for USA acc. to UL 1004-1 and for Canada acc. to CSA C22.2 No. 100-14 (UL-File E233349)

Brinkmann Motors up to 15 kW, 60 Hz, and up to max. 600 V are available with UL Recognized Component Mark approval as special designs.

Compliance Certification number CC311B according to 10 C.F.R. §431 (NEMA PREMIUM EFFICIENCY)

Brinkmann motors ranging from 1.3 kW to 13 kW, 50 Hz, are available with the China Energy Label GB18613-2020, Grade 3 upon request.

Brinkmann motors ranging from 0.86 kW to 15 kW, 60 Hz, are available with NEMA PREMIUM MG 1 upon request.

Brinkmann motors ranging from 1.1 kW to 6.3 kW, 60 Hz, are available with KEMCO certification for South Korea upon request.

### Non-European Regulations, Standard motors

Upon request. Depending on actual motor rating and sizing (Power / Motor efficiency class) deviations in pump and motor configurations are possible. An overview of pumps built with standard motors can be found on our website.

#### Current / Rated current

The current ( $I_{catalog}$ ) stated at the name plates is used for the sizing of electronic components.

Motor  $\leq 0.12$  kW (50 Hz):  $I_{max} = I_{catalog}$

Motor  $0.17$  kW –  $0.32$  kW:  $I_{max}$  = please see table

Motor  $\geq 0.48$  kW:  $I_{max} = 1.05 \times I_{catalog}$

Power	$I_{max}$ @400 V, 50 Hz	$I_{max}$ @460 V, 60 Hz
0.17/0.195 kW	$I_{max} = 1.2 \times IN$	$I_{max} = 1.08 \times IN$
0.22/0.255 kW	$I_{max} = 1.14 \times IN$	$I_{max} = 1.08 \times IN$
0.32/0.365 kW	$I_{max} = 1.24 \times IN$	$I_{max} = 1.1 \times IN$

Special voltages upon request.

For extended voltage ranges we mention only the highest current value in our data sheets.

# Technical Information

## Electrical Features

### Circuits

#### Standard voltage changing $\Delta / \gamma$

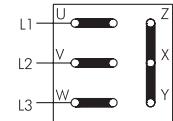

e. g. 220 – 240 V / 380 – 415 V, 50 Hz

$\Delta$  (Delta Connection)       $\gamma$  (Star Connection)

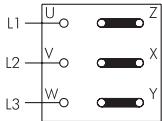

#### Voltage changing 1:2 $\gamma\gamma / \gamma$

e. g. 230 V / 460 V, 60 Hz

$\gamma\gamma$   
Low Voltage

$\gamma$   
High Voltage

### Set-up altitude and coolant temperature

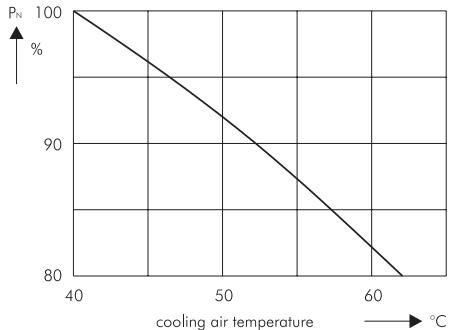

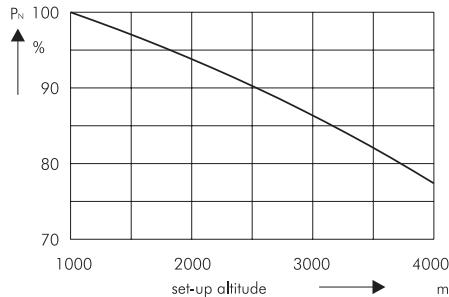

The specified power ratings ( $P_N$ ) and operating values for the motors apply for operating mode S 1 according to EN 60034-1 (continuous operation) at a frequency of 50 Hz, rated voltage, a cooling air temperature (KT) of max. 40 °C and a set-up altitude of up to 1000 m above sea level. The motors can also be used at a cooling air temperature above 40 °C up to max. 60 °C or set-up altitude above 1000 m above sea level. In such cases the power rating must be reduced according to the diagrams, or an appropriately larger motor version or higher heat class has to be selected. However, a deviation from the specified data is necessary when the cooling air temperature is reduced according to table simultaneously at set-up altitudes higher than 1000 m above sea level.

Set-up altitude / m	Maximum cooling air temperature for heat class F / °C
0 up to 1000	40
1000 up to 2000	30
2000 up to 3000	19
3000 up to 4000	9

### Installation

#### Brinkmann Screw Pump with connector

Motors up to 5.5 kW are available with HAN 10-pin connector; motors 6.0 kW to 13 kW are available with HAN modular plug connector.

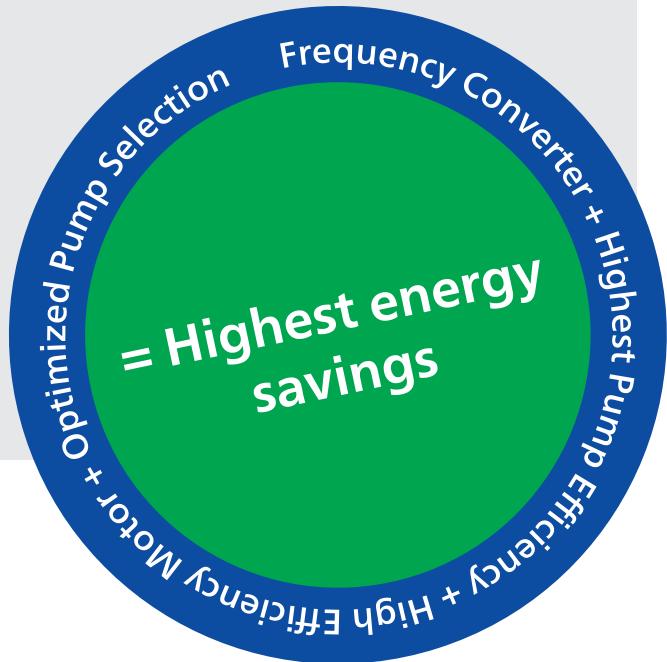

The **energy consumption** of a screw spindle pump is primarily influenced by the efficiency of the pump, the efficiency of the motor and the sizing of the pump with respect to the working point of the system.

Within the scope of our **seminars** we offer our support for:

- pump selections
- supply you with detailed information on the use of variable frequency drives
- show potential energy savings through pump controls
- support you locally in retrofitting existing applications and systems

For detailed information please do not hesitate to contact us.

### Regulation

Regulation is an operation with which a physical value such as pressure is continuously sensed and compared with a set value. In the event of deviation the regulation device (here a PI controller) provides for the desired adaptation.

With regulation a check is made whether a desired state is achieved or not. This allows for a process to reach a predetermined operating pressure while adjusting the flow of the pump to the required flow of the consumer.

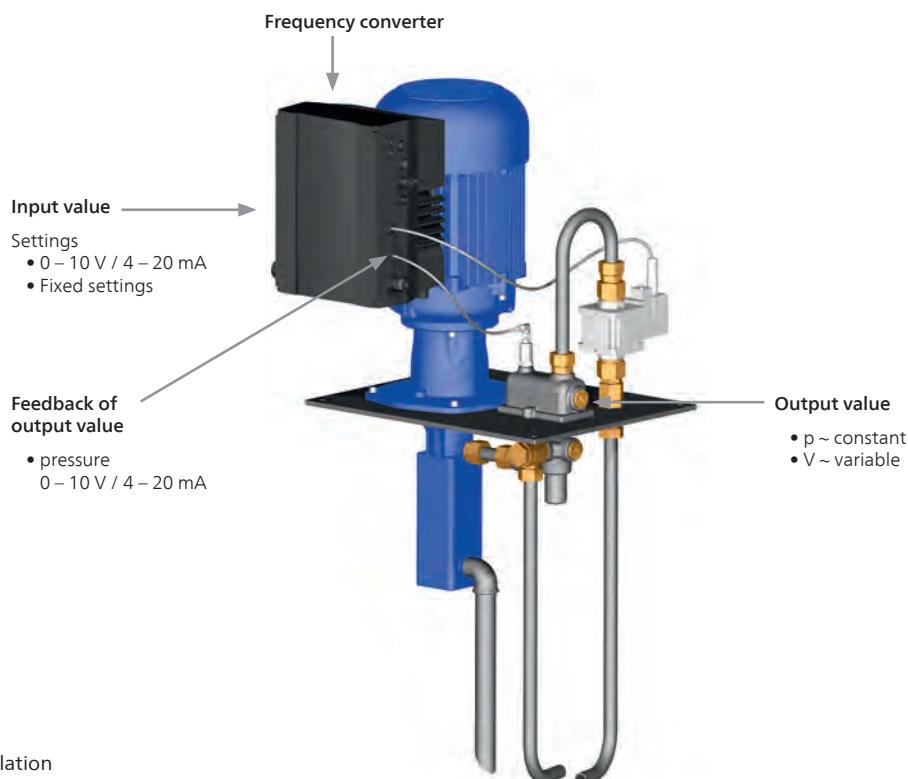

Fig. 1: Scheme of regulation

# Technical Information

## Control / Regulation

### Variable Speed Control of High Pressure Pumps

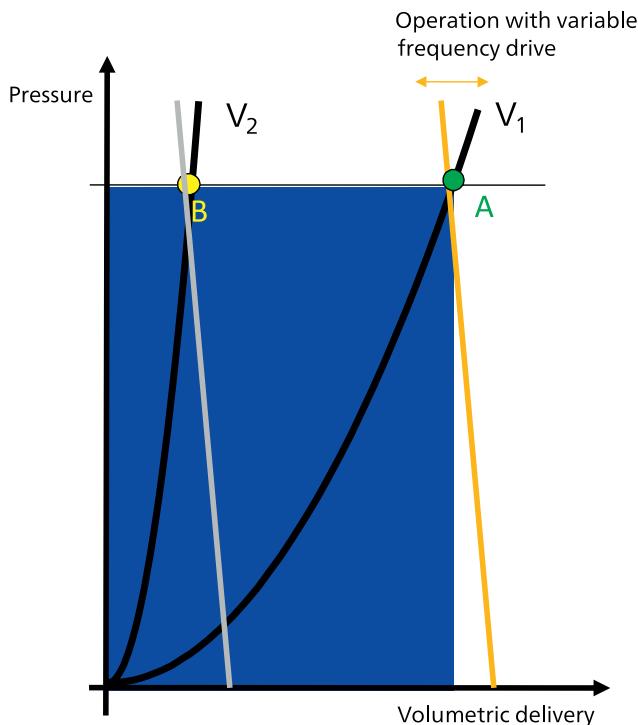

Fig. 2: Potential energy savings of a screw pump with variable frequency drive and two consumers.

Working point	Pressure relief valve	Variable frequency drive	Note
A	closed	no	Design point
B	open	no	Energy loss and flow through the pressure relief valve
B	closed	yes	<b>Energy savings up to 80 %</b> (e.g. pressure regulation)

### Pump curve array of a screw pump that is controlled with a VFD

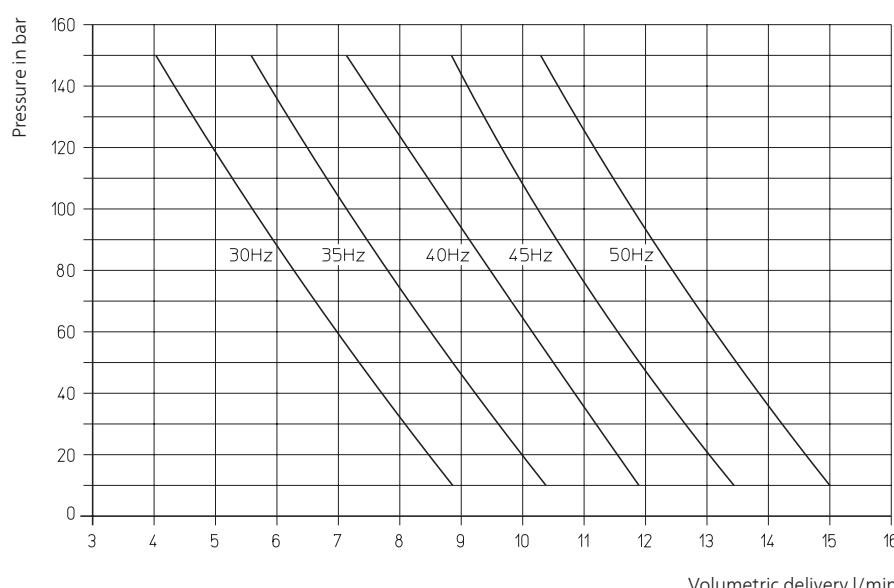

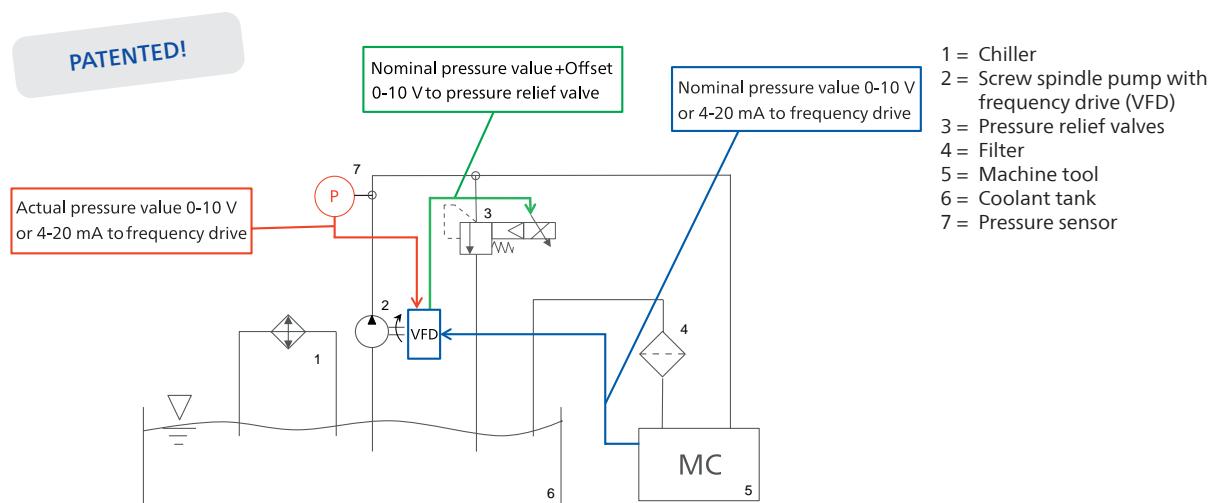

Fig. 3: Example of a BFS130/150 in oil 20 mm<sup>2</sup>/s

# Technical Information

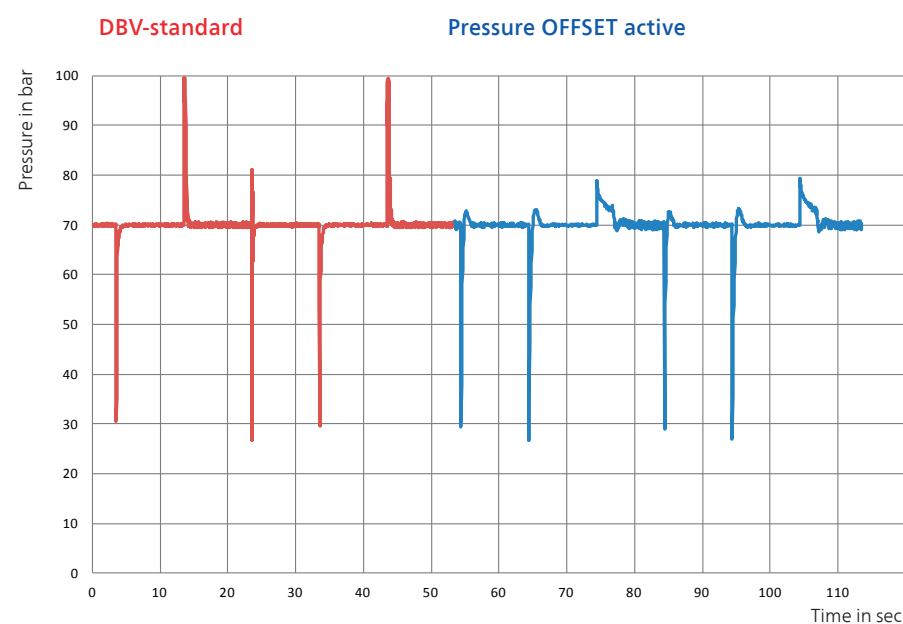

## Control / Regulation

### Brinkmann Pumps Offset Regulation for High Pressure Pumps

The target pressure is calculated by the VFD based on the working point and is not supplied by the machine tool. The intelligent control of the valves allows for minimizing potential pressure spikes.

### Minimizing of pressure peaks during tool change

# Technical Information

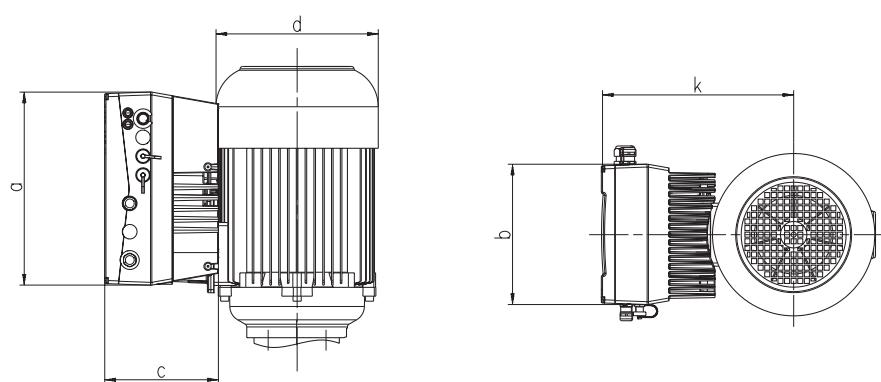

## Control / Regulation

# Models and Applications for High Pressure Screw Pumps

# Models and Applications for High Pressure Screw Pumps with silicon carbide spindle housings

Screw spindle pumps with silicon carbide spindle housing and highly wear resistant spindles are capable of achieving extremely high pressures.

Design -H: Pressure outlet is located above mounting plate; this provides convenient options for connection pipework.

Brinkmann high pressure screw pumps are designed for pumping filtered and lubricating fluids such as coolant oils and watersoluble coolants.

High pressure screw pumps are NOT designed for dry-running.

Applications		Materials of construction	
Types of fluid oils, cooling/ cutting oils, coolants Kinematic viscosity 1...45 mm <sup>2</sup> /s (45 cSt) over 45 mm <sup>2</sup> /s on request		Pressure and Suction Housing Spindle Housing	
Pumping temperature max. 60 °C * (* over 60 °C on request) max. Air content 3–5 vol. %		Screw spindles	
Recommended filtration levels General Machining (Turning, milling, drilling) < 50 µm Grinding and machining of aluminum (CBN etc.) < 20 µm		Seal	
For additional information please refer to page 13.

Highly wear resistant SIC-bushing around labyrinth seal and coated driving male spindle	-KBT5	○	○	○
Highly wear resistant SIC-bushing around labyrinth seal, specially coated driving male spindle and outer female spindles	-KBT5N	○	○	○
Specially coated driving male spindle and outer female spindles	-T5N	○	○	○
Axial thrust compensation through radial slide bushing inside the suction cover	-A	○	○	●
Inline installation – vertical, Mechanical seal and internal leakage return; positive suction pressure of up to 7 bar	-G	□	□	□
Viscosity > 45 mm <sup>2</sup> /s		○	○	○

○ available at extra charge ● standard □ upon request – not available

The power consumption of the pumps increases with higher discharge pressures. Depending on the actual installation conditions it is possible that pressures can occur which exceed the target design pressure. The motor must be sized in a way that the maximum pressure occurring in the application can be satisfied without overloading the motor. The listed pump / motor combination are for standard systems (pump + pressure relief valve).

In individual cases custom pump / motor combinations are feasible upon request.

# Models and Applications for High Pressure Screw Pumps with cast iron spindle housing

Screw spindle pumps with **cast iron spindle housings** and highly wear resistant spindles can generate **pressures of up to 80 bar**.

Brinkmann high pressure screw pumps are designed for pumping filtered and lubricating fluids such as coolant oils and watersoluble coolants.

High pressure screw pumps are NOT designed for dry-running.

Applications	Materials of construction
Types of fluid oils, cooling/ cutting oils, coolants	Pressure and Suction Housing Cast iron
Kinematic viscosity 1...45 mm <sup>2</sup> /s (45 cSt) over 45 mm <sup>2</sup> /s on request	Spindle Housing Cast iron, hardened
Pumping temperature max. 60 °C * (* over 60 °C on request)	Screw spindles Hardened tool steel, specially treated alloy;
max. Air content 3–5 vol. %	Seal highly wear resistant and precision ground. Viton
Recommended filtration levels General Machining (Turning, milling, drilling) < 50 µm	
Machining of materials of limited hardness (not for grinding applications). For additional information please refer to page 13.	

Version	Model Index	Immersion Style	Inline Style for inline installation – horizontal or vertical with mechanical seal; positive suction pressure of up to 7 bar
			BFG2
Inline installation – vertical Mechanical seal and internal leakage return; positive suction pressure of up to 7 bar	-G	○	●
Viscosity > 45 mm <sup>2</sup> /s		○	○
4-pole motor	-4	○	○

○ available at extra charge   ● Standard

Dimensional data for screw spindle pumps with cast iron spindle housings are identical to those with silicon carbide housings. The **flow rates** of screw spindle pumps equipped with cast iron housings are **up to 10% below** those flow rates of the screw spindle with silicon carbide housings which are shown on the following pages.

The maximum operating pressure is 80 bar.

## Valves

### Adjustable Pressure Relief Valves

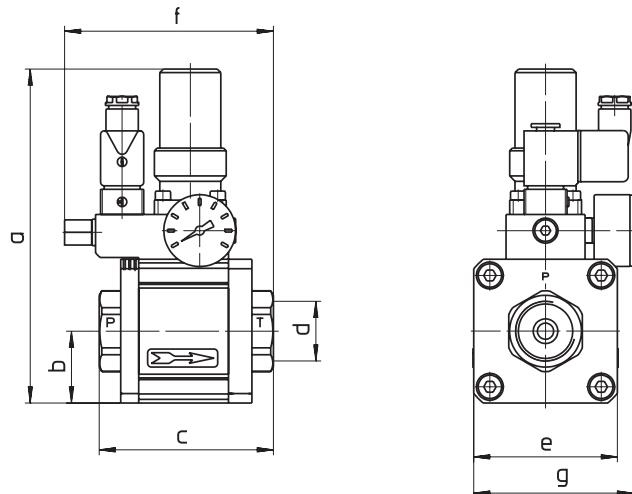

Adjustable pressure relief valves allow for variable operating pressures anywhere between 5 – 120 bar. In order to prevent overloading of the motor, however, the maximum operating pressure may never exceed the highest allowable operating pressure for the specific pump and motor combination in use.

The system user must ensure that the operating pressure never exceeds the highest allowable operating pressure (i.e. by using a second non adjustable pressure relief valve which is set for the highest allowable pressure).

#### 3-HPB Series

The 3-HPB series are manually adjustable pressure relief valves. The valves are pneumatically operated and control the operating pressure with the control pressure in a ratio of 1:10 and 1:18.5.

Without power and air supply the valve is fully open and in dump mode.

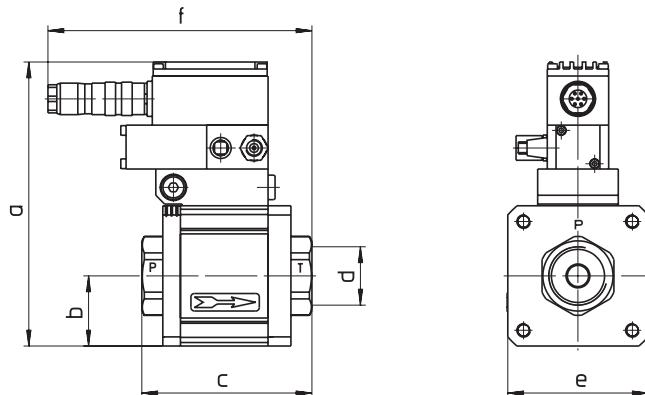

Type	Pressure p (bar)	Flow Qmax (l/min)
3 - HPB - 08	10 – 200	18
3 - HPB - S 15	5 – 64	100
3 - HPB - H 15	5 – 120	100
3 - HPB - S 32	5 – 64	400
3 - HPB - H 32	5 – 120	240
3 - HPB - S 50	5 – 64	800

#### SPB Series

SPB Series pressure relief valves are electronically adjustable valves. The valve requires an analog signal of 0 – 10 V. The ratio between the control voltage and the operating pressure is 1:10 and 1:18.5.

Without power and air supply the valve is fully open and in dump mode.

Type	Pressure p (bar)	Flow Qmax (l/min)
SPB - 08	10 – 200	18

## Valves

### Non-adjustable Pressure Relief Valves

Screw spindle pumps are positive displacement pumps which always require the installation of a pressure relief valve in order to prevent bursting. Pressure relief valves are set for a maximum operating pressure and protect the pump motor from overloading. Once the set maximum pressure is reached, the relief valve opens and the excess flow rate is passed through the valve back into the tank. In order to avoid pressure spikes in the system a pressure relief valve which dampens against vibration is recommended. BBV/HBV series are such relief valves. They are available in 10 bar increments and are preset by the factory for the highest allowable operating pressure for the specific pump and motor combination.

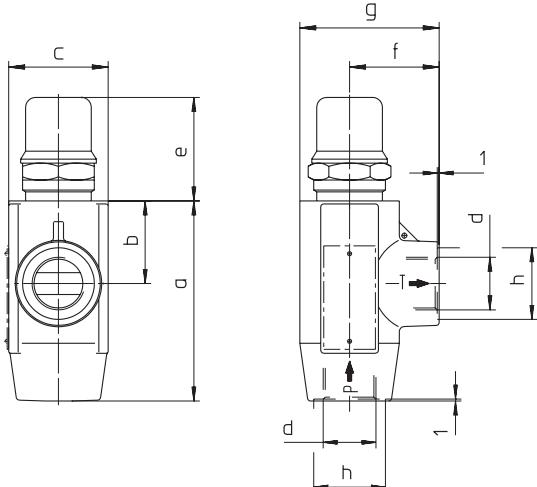

### Non-adjustable Pressure Relief Valves BBV/HBV

Non-adjustable Pressure Relief valves of the series BBV and HBV are shock absorbent valves which open at a preset pressure. The relief valve opens at the factory set pressure which is available in 10 bar increments and the excess flow rate is diverted through a separate bypass line back into the tank.

## Service at BRINKMANN PUMPS

Customer satisfaction is the greatest asset that we as a company can possess. This is why we have developed the „Advance“ service package – which offers customized solutions to satisfy your specific needs. For example, we consult with you and actively support you in determining your actual requirements for a new pump, verifying the application and installation options on site. Then we develop your specific pump followed by subsequent start-up support. But, our range of services does not end here. You will benefit from our very responsive Customer Service Team that will keep you up and running at all times over the live of the pump. In addition you will benefit from a number of additional advantages offered within the BRINKMANN PUMPS Advance program.

### EXPERT

#### The benefits of more know-how

With the BRINKMANN PUMPS expertise and our many years of experience, we do our best to assist you in achieving higher quality results within your operation.

### SMART

#### The benefits of intelligent solutions

BRINKMANN PUMPS provides you with intelligent solutions and a number of benefits that makes purchasing a high-quality pump much easier.

### EXPRESS

#### The benefits of fast service

At BRINKMANN PUMPS, we particularly focus on processing customer requests and orders very quickly.

### CONNECT

#### The benefits of excellent availability

If you expect excellent availability, then you are definitely at the right place at BRINKMANN PUMPS.
